

## RDBMS\_Assign6

**Assignment 6: Create a new database user with specific privileges using the CREATE USER and GRANT commands. Then, write a script to REVOKE certain privileges and DROP the user.**

**-- Create a new database user**

```
CREATE USER new_user WITH PASSWORD 'password';
```

**-- Grant specific privileges to the new user**

```
GRANT SELECT, INSERT, UPDATE ON table_name TO new_user;
```

**-- Revoke INSERT privilege from the user**

```
REVOKE INSERT ON table_name FROM new_user;
```

**-- Drop the user**

```
DROP USER new_user;
```

In this :

- We first create a new user named new\_user with a specified password.
- Then, we grant SELECT, INSERT, and UPDATE privileges on a specific table (table\_name) to the new user.
- Next, we revoke the INSERT privilege from the user. This means they will no longer be able to insert data into the specified table.
- Finally, we drop the user, removing their access to the database entirely.
